STEP 1

# Pick a plan

Start free on **RapidAPI**. You only pay for websites where contacts are found.

STEP 2

# Send a website

Any domain or URL. Add a **country** to read local phone numbers.

GET /v1/contacts

```
GET /v1/contacts
?domain=cafemaltaaustin.com
&country=US
&emails=all

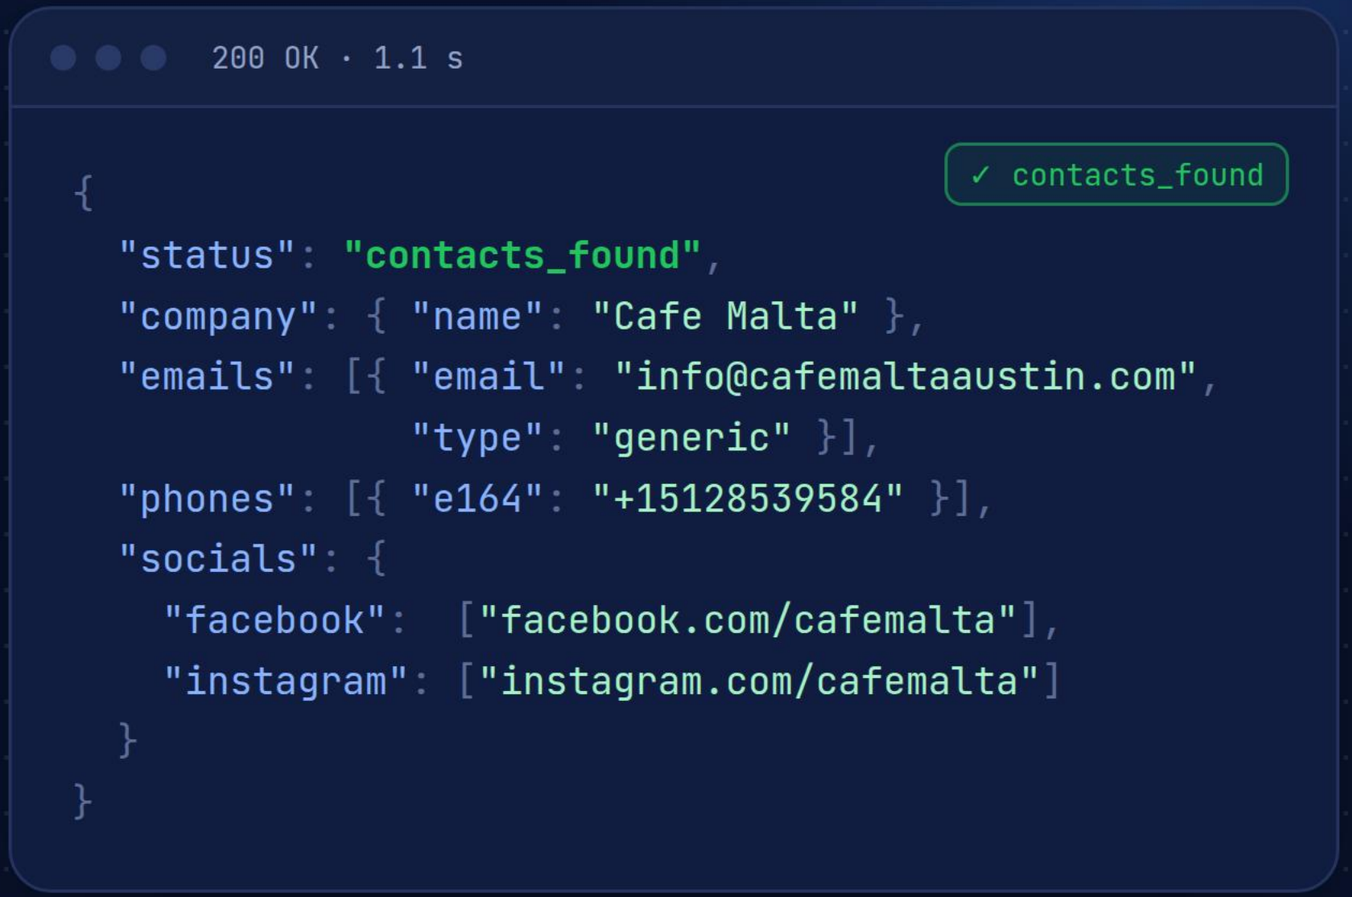

x-rapidapi-key: YOUR_KEY
```

Send request →

STEP 3

# Get contacts

Emails, phones, socials and company info, each with the page it came from.

STEP 4

# Or use Google Sheets

One formula per row. No code, results cached for **6 hours**.
